

CT Secure Cloud Backup for Microsoft 365

CT Secure Cloud Backup for Microsoft 365 is a fully managed service that gives you comprehensive backup and replication for your Microsoft Office 365 suite. This includes unlimited storage and limitless retention policy for Exchange Online, SharePoint Online, Teams and OneDrive for Business. You can gain complete peace of mind that your data is totally protected.

Unlimited storage or data

All data included in per user billing model, including Exchange Online, SharePoint, OneDrive & Teams.

Priced per user

Simplified billing model, allowing addition users to be added throughout contract duration.

No hidden costs

No upfront costs, no setup fees, no bandwidth fees, no storage fees.

Fully managed service

We provide the licensing, storage and support as one fully managed service.

Inclusive 24/7 support

All our remote backup customers have access to our UK 24x7 support desk so you can be confident you can get to your data when you need it most.

Tailored retention of data

Tailored retention periods to suit your compliance needs, from 1yr to unlimited retention, we design the service around your needs

We protect your Microsoft 365 data in the following scenarios...

Accidental Deletion

If you delete a user, whether you meant to or not, that deletion is replicated across the network, along with the deletion of their personal SharePoint site and their OneDrive data. Daily automatic backups of the O365 data protects you and your organisation against accidental deletion.

Retention Policy Gaps and Confusion

Microsoft 365 has limited backup and retention policies that can only fend off situational data loss and is not intended to be an all-encompassing backup solution. With our tailored retention you can rest assured that even if a user's account gets deactivated/deleted that can bring the data back.

Internal Security Threats

The idea of a security threat brings to mind hackers and viruses. However, businesses experience threats from the inside, and they are happening more often than you think. Alleviate the risk of data being deleted or corrupted with insider protection.

External Security Threats

Malware and viruses have done serious damage to organizations across the globe. Not only is company reputation at risk, but the privacy and security of internal and customer data as well. Protect your email data from external security threats with our fully managed service.

With Microsoft 365, it's your data

Microsoft Office 365 enables your organisation to work anywhere, anytime, without the need to host your own email infrastructure. It also provides a great way to minimise your onpremises footprint and free up IT resources. Even though Microsoft hosts the infrastructure, this doesn't replace your responsibility to maintain a backup of your Office 365 data.

Microsoft 365 Backup compared to CT Secure Cloud Backup for Office 365

CT's Veeam Cloud Connect platform provides a cloud based backup of your key Office 365 tenant services, your data is backed up incrementally every night to our cloud and can be kept for as long as you want. Microsoft have built a resilient platform on which to run your organisation, it is your responsibility to keep control of and backup the data you control.

By keeping a secure copy of your Office 365 data on our cloud platform you can be sure you are protected from security threats which can damage or delete your data.

CT Secure Cloud Backup for Office 365	Microsoft Office 365
Inbox/folder data - unlimited	Inbox/folder data - limited to 2 years
Deleted items - unlimited	Deleted items - limited to 1 month
Auto-archived data - unlimited	Auto-archived data - limited to 1 month
Junk emails - unlimited	Junk emails - limited to 2 weeks
Employee leaves - unlimited	Employee leaves - limited to 1 month

True ransomware protection

We use Cloudian Object storage to provide a totally secure platform for your data.

Our S3 compatible platform has object lock functionality which gives our clients full ransomware protection.

Object Lock (also known as WORM, which stands for “write once, read many”) ensures that data, once written, cannot be changed, or deleted until a specified time has passed. Because the data cannot be modified, it, therefore, cannot be encrypted, thus rendering the malware ineffective. No one, not even those with admin rights, can change the data, thus also protecting it from employees with malicious intent.
