

Case Study

Microsoft 365 backup for maintenance & management provider

Nick Williams,
Technology Manager,
Stowens Ltd

“The backup of our MS365 suite provides us with valuable **peace of mind** that all critical data is protected. We are able to perform granular file restore or entire directories, and also email restore or entire mailboxes. The unlimited storage offering allows us to **add new users easily** as our business grows with all services provided by CT requiring very little maintenance from our side.”

Stowen Group, leading providers of maintenance and management services for all energy sectors, were looking for a provider to backup their MS365 suite and to find a solution that covered their SharePoint data and email objects.

They were aware that there is no backup provision in MS365 or the ability to restore objects that have been deleted and no longer retained by policy. The platform focuses on high-availability but does not provide restore functionality past the standard retention policy of one month.

CT advised on the deployment of **Veeam backup and replication for Stowen’s Microsoft 365 suite**, including unlimited storage and a tailored retention policy for Exchange online, SharePoint Online, OneDrive for business and Teams.
