

Endpoint Security Solution

CT's Endpoint Security solution, powered by Cynet, provides a unified platform for detection, prevention, correlation, investigation and response across endpoints, mobile devices, users, networks, SaaS and cloud applications. The platform delivers comprehensive and efficient protection for IT security teams with limited resources to provide superior protection within budget.

Endpoint Security provides the essential technologies you need to protect your organisation in one automated, simplified platform that delivers enterprise-grade protections with less manual effort and lower cost. And it's backed by a team of security experts 24/7.

The capabilities included in our Endpoint Security solution work together to deliver the best protection possible across your expanding attack surface.

What does CT's Endpoint Security include?

We protect your endpoints

Endpoint Security keeps your workstations, servers, and mobile devices safe from malware, ransomware, and other dangerous cyber threats. With proven endpoint protection, device control, mobile protection and endpoint security posture management to detect and fix endpoint vulnerabilities and configuration risks.

We protect your users

We continuously monitor user behaviour to detect and block malicious insiders and compromised accounts, with user behaviour analytics, deception and domain filtering technologies.

We protect your network

Our Endpoint Security solution is able to detect and prevent stealthy attackers from accessing and moving across your network, as well as blocking connections to malicious sites with network analytics and port scanning.

We protect your SaaS/cloud apps

Our platform automatically identifies, prioritises, and fixes security risks across all your SaaS and cloud applications.

We protect your email

From monitoring your email for malicious attachments and links, we can block risky senders and domains to minimise the risk of this attack entry point with email security.

We protect your third-party systems

The Endpoint Security solution can detect and respond to threats across third-party integrations, such as active directory, firewalls and SaaS/cloud apps.

Unmatched Performance

The Cynet platform that powers our Endpoint Security has achieved outstanding results in the 2023 MITRE Engenuity ATT&CK Evaluations: Enterprise, outperforming the majority of vendors in several key areas. Using no configuration changes, Endpoint achieved 100% visibility (nothing escapes detection) and detected every one of the 143 attack steps, as well as provided analytic coverage (threat details and context) for 100% of the 143 attack steps.

24x7 security operations centre

Get a team of world-class cyber security experts working around the clock to keep you safe by monitoring your environment and immediately addressing threats.

Log management and XDR

Collect high-priority log data to quickly and accurately uncover threats lurking across your environment.

End-to-end automation

Our Endpoint Security solution can automatically investigate and remediate all attack components across your environment using best-practice incident response workflows with advanced response automation technology.

Upgrade to CT's Endpoint Security for instant, effortless protection against cyber threats.
